SUMMARY

Computer Engineering student seeking internships and jobs in embedded systems and cybersecurity. Sole technical staff member at Charge Mahal Enerji; single-handedly built the platform's web, mobile and payment software. TEKNOFEST 2026: 5th place in Unmanned Ground Vehicle; also competed in Electronic Warfare and Chip Design.

TECHNICAL SKILLS

Embedded & Hardware: ESP32, Arduino (C/C++), sensor integration, IMU, strain gauges, Li-ion battery packs, BMS, DC-DC, BLDC drivers, soldering, welding
Software: C/C++, Python, Java, Dart (Flutter), PHP, JavaScript, Node.js/Express
Backend & Data: REST APIs, JWT, MySQL, MongoDB, Apache
RF & Signal: PlutoSDR, Welch PSD, spectrum analysis, direction finding, PySide6
Security & Tools: Web penetration testing basics, bug bounty methodology, Linux, Shell, Git/GitHub

EXPERIENCE

Charge Mahal Enerji A.Ş. — Technical Support & Operations Specialist *Jul 2025 – Present*

- As the company's only technical staff member, I manage daily EV charging station operations, new station activations and revenue/usage reporting end to end.
- Coordinate with the technical team and field staff on fault, connectivity, payment and charge-start issues; resolve payment, refund and invoice requests.
- Single-handedly built the corporate website (PHP/MySQL), the Flutter operator app (iOS/Android, JWT sessions) and a PayTR-based payment-link panel.

FLO Perakende ve Pazarlama A.Ş. — Sales Advisor & Warehouse Associate *Mar 2024 – Dec 2024*

- Handled customer relations, stock tracking and warehouse organization.

Esginler Group İnşaat — Technical Support / Production Site *Jul 2023 – Aug 2023*

- Worked with the technical team on assembly at a tiny house production site.

PROJECTS

KAİRA KGM Unmanned Ground Vehicle — TEKNOFEST 2026 · 5th place · 10-person team *2026*

- On a vehicle built from scratch: chassis welding and assembly, suspension, front wheel and steering assembly, wheel alignment and hydraulic brake installation.
- Assembled and wired the electrical/electronics panel (1000 W BLDC controller, Pixhawk, Arduino Nano, 12/24 V DC-DC); 13S6P Li-ion battery pack and BMS integration.

RF Signal Analysis & Direction Finding — TEKNOFEST 2026 Electronic Warfare · 5-person team *2026*

- Built all of the software: signal detection on PlutoSDR recordings with Welch PSD and an adaptive threshold, SNR/bandwidth-based classification, and location estimation via 360° scanning and LOB intersection (Python, PySide6); validated on a real DJI Inspire 2 recording.

LifeCoreSen — Structural Health Monitoring (IoT) — 3-person team *2025*

- Board design, assembly and software: humidity, temperature, strain and IMU sensors on ESP32; Node.js/MongoDB backend and web dashboard over Wi-Fi/HTTP; prototype tested on a concrete block.

Handmade Spot Welder — 2-person project *2025*

- Rewound a microwave-oven transformer's secondary for high current and low voltage; built a system with a digital timer and a copper electrode probe.

EDUCATION

Biruni University — B.Sc. Computer Engineering (100% English) *2023 – Present*
42 Istanbul — Piscine — intensive, peer-reviewed software program *2025*

CERTIFICATES

Ethical Hacking: Web Pentesting & Bug Bounty — Udemy (Oct 2024) · T3 Underwater Systems Training — Deneyap (Jan 2025)
National Technology Summit — ITU TEKNOFEST Club (May 2025) · T3 Unmanned Sea Vehicle Training — T3 Foundation (Jul 2025)
